

WEEK 1 — TESTING PHASE

Goal:

Find your current level. Test your max reps for squats, dips, and pull-ups.

Rest 5 minutes between each — you'll be close to failure.

1. SQUATS (Ground)

Warm-Up

- High knees (30–60 sec)
- 3–5 slow squats

Max Test

- Start with 1 slow rep to check form
- Go for your max — stop when your form slips
- Working reps = max $\times$ 0.8 (rounded up)

Example: 14 max $\rightarrow$ 12 working reps

2. DIPS (Parallel Bars)

Warm-Up

- Incline push-ups on bars

Max Test

- Go for your max dips
- 0 dips? Do incline push-ups
- Working reps = max $\times$ 0.8

3. PULL-UPS (Pull-Up Bar)

Warm-Up

- Australian rows

Max Test

- Go for your max pull-ups
- 0 pull-ups? Do Australian rows
- Working reps = max $\times$ 0.8

Rest:

Take the weekend off — recover and let your body adapt.

WEEK 2+ — FULL-BODY SESSIONS

Schedule: Monday / Wednesday / Friday

Workout (in order):

- Squats — 3–5 sets $\times$ 80% of max
- Dips or Incline Push-Ups — 3–5 sets $\times$ 80% of max
- Pull-Ups or Australian Rows — 3–5 sets $\times$ 80% of max

Progression:

Gradually increase volume — aim to add one rep per exercise each session if it feels right.

Re-test your max every 4 weeks.

TRAINING PRINCIPLES

- Controlled reps > fast reps
- Rest 1–2 minutes between sets
- Stop when form breaks — that's your limit
- Even one more rep = progress
